UKCA Marking for Batteries

To whom it may concern:

The UKCA certification is a safety standard used for products being placed on the market in Great Britain (England, Scotland and Wales). The UKCA marking applies to any products that currently require the CE marking. The UKCA certification standards are nearly identical to the CE safety requirements.

Power Sonic's batteries do conform to the UKCA standards, however until there is further clarification from the agency stipulating that sealed lead acid batteries require the mark, Power Sonic will address this on a customer specific basis. If you have any questions regarding the marking or the standards covered by the certification, please do not hesitate to contact your Power Sonic customer service representative.
